

New Onset Seizure

- Worrisome features:**
- Developmental delay
 - Developmental regression
 - Abnormal neurological examination (including skin findings)
 - Myoclonic seizures
 - Long seizures (>2 minutes)
 - Frequent seizures (>1/week, excluding absence seizures)

**Please note: when there is a referral to Neurology, please indicate:*

- 1) Care Network status
- 2) Preferred practice region (Main Campus, SMC, Valencia, South Bay, Arcadia). Note that currently only Main Campus has EEG facilities.
